7. LENGTH OF OBSERVATION not reported		8. NUMBER OF OBJECTS two		9. COURSE One, NE Two SE	
10. BRIEF SUMMARY OF SIGHTING  Object traveling too fast to follow in TX. Red with trailing lines. Moving NE across sky. Looked like meteor or comet. Same object assumed to reappear heading SE about 15 min later.				11. COMMENTS Meteor observations.	

25 APR

(1)

Dear Sir,

I'm twelve years old and I am attending sixth grade. I am very interested in your line of work. I'm writing to try to find out some information concerning the incident in New Mexico where the Patrol Man claimed to see a flying saucer. I know you must keep supreme secrecy in these cases but I would appreciate it very much. Saturday April 25, a friend and I were looking through my telescope. We spotted something going across the sky terribly fast; I tried to get the telescope on it but had trouble doing so because of its tremendous speeds but did manage to get a couple good glimpses at it, under the telescope it looked like a meteor or ~~com~~ comet but about fifteen minutes later it came back across. When I first sighted it it was going northeast across the sky and when I saw it again it was traveling south east. Through my telescope the object appeared to be red with trailing ~~lines~~ ~~comets~~ lines something like this -

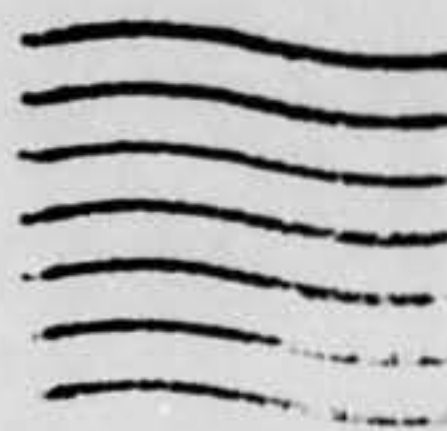

I would also appreciate some information  
on any other sighted U. F. O.'s available.  
Thank You.
